The Challenge

A growing **B2B eCommerce enterprise** required a robust **marketplace platform** that could handle:

- Bulk order management with tiered pricing and supplier-based approvals.
- Complex shipping calculations based on container size, weight, and freight charges.
- Multi-vendor setup with custom pricing models for different buyers.
- Automated order workflows to reduce manual processes.
- A modern, intuitive UI/UX to enhance the B2B purchasing experience.

The client needed a **fully customized B2B WooCommerce (https://codetrappers.com/wordpress-for-ecommerce/) marketplace** that could support **large-scale wholesale transactions, freight-based shipping, and seamless vendor-buyer interactions**.

The Solution

We designed and built a **feature-rich B2B marketplace** with advanced capabilities:

Custom Bulk Order Management System

- Enabled bulk order pricing tiers with dynamic discounts.
- Developed vendor-specific product availability & MOQ (Minimum Order Quantity) rules.
- Implemented RFQ (Request for Quote) system for negotiation-based ordering.

Advanced Freight & Shipping Calculations

- Created container-based freight shipping calculators based on weight, volume, and location.
- Integrated multi-carrier shipping options with automated rate calculations.
- Enabled split-shipping for large bulk orders, reducing logistics costs.

Seamless Multi-Vendor & Wholesale Functionality

- Developed vendor dashboards for order tracking & bulk invoicing.
- Integrated customized tax rules & pricing per vendor category.
- Centralized Enabled direct vendor-buyer communication for personalized deals. partner integration via Shiprocket for wider reach.

Modern UI/UX for a Streamlined Shopping Experience

- Designed an intuitive B2B-focused interface optimized for large transactions.
- Created a responsive, mobile-friendly design for seamless order placements.
- Built custom dashboards for buyers & vendors to track orders, shipments & payments.

Automated Workflows for Efficient Order Processing

- Implemented order approval, invoicing & fulfillment automation.
- Developed AI-driven demand forecasting & inventory tracking.
- Integrated ERP & accounting software for real-time financial management.

The Results

2.5x Faster Order Processing, 40% Reduction in Shipping Costs, Scalable Multi-Vendor System
