If your WordPress site has been hacked (https://codetrappers.com/malware-removal-for-wordpress/), don’t panic! Follow these steps:

1 **Take Your Website Offline** – Prevent further damage by disabling access. 2 **Scan for Malware** – Use security plugins like Wordfence or Sucuri. 3 **Remove Malicious Code** – Delete infected files and scripts. 4 **Update Everything** – Ensure WordPress, themes, and plugins are up to date. 5 **Secure Your Website** – Implement firewalls, limit login attempts, and enable 2FA.
