1. **Choose a Headless-Ready Hosting Provider** – Use **WP Engine, Kinsta, or Cloudways** for managed WordPress hosting.
2. **Enable API Access** – Activate **REST API (https://codetrappers.com/api-integration-automation/) or GraphQL (WPGraphQL)** for content retrieval.
3. **Select a JavaScript Framework** – Build the front-end with **Next.js, Nuxt.js, or Gatsby**.
4. **Deploy & Optimize** – Use **Cloudflare, Vercel, or Netlify** for **performance and security**.
