What is the best way to improve WordPress website speed?

3 Mar 2025 1 min read

To improve WordPress website speed, follow these steps:

1. **Use a lightweight theme** – Avoid bloated themes with excessive scripts.
2. **Enable caching** – Use plugins like WP Rocket or LiteSpeed Cache.
3. **Optimize images** – Compress images using WebP format.
4. **Minimize plugins** – Deactivate unnecessary plugins that slow performance.
5. **Use a CDN** – Distribute content globally for faster load times.

By implementing these optimizations, a WordPress website can achieve **faster load times and improved Core Web Vitals (https://codetrappers.com/page-speed-optimization-for-wordpress/) scores**, which help in SEO and user experience.
