Be the source AI answers cite

Structured data, crawler access and citable pages so ChatGPT, Perplexity and Google AI Overviews name you as the source. Any platform, measured before and after.

ChatGPT, Perplexity, Gemini and Google AI Overviews answer questions by reading sites they can parse and trust. We make yours one of them: structured data, crawler access, citable pages and a way to measure whether it worked. Any platform, not only WordPress.

What you get

Inside AI Search Readiness

Get in touch (https://codetrappers.com/contact/)

A crawl and citation audit

Which AI crawlers can reach you, which are blocked at the firewall or in robots.txt, and which of your pages are being cited today for the questions you want to own.

A connected schema graph

Organization, Person, Service, Article and FAQ nodes that reference each other, so a model can tell who wrote what and on whose behalf, rather than guessing from the page.

Pages structured to be quoted

Direct answers near the top, one claim per paragraph, headings that read as the questions people ask. The same writing that helps a human skim helps a model extract.

Machine-readable entry points

An llms.txt file, clean sitemaps, sane canonical and Open Graph metadata, and feeds that stay valid. Small files, but they are what an agent reads first.

A measurement baseline

A fixed set of questions checked against each AI platform before and after, so the report shows a change in citations rather than a change in feelings.

The service

What we change, and why it matters to a model

Most of this is ordinary technical SEO done carefully. The difference is who the reader is.

Crawler access

Cloudflare and security plugins block GPTBot, ClaudeBot and PerplexityBot by default on many sites. We open what you want open, keep out what you do not, and log both.

Entity clarity

Your company, your people and your services described once, consistently, with the same names and identifiers everywhere, so the model builds one entity rather than three.

Answer-first content

The pages you already have, edited so the answer comes before the preamble. We rewrite structure, not your voice.

FAQ and how-to markup

Real questions with real answers, marked up so they can be lifted straight into a response with attribution back to you.

Freshness signals

Visible dates, changelogs and a publishing rhythm. Models weight recency, and a site that looks abandoned gets skipped.

Brand mentions off-site

Directories, profiles and citations that agree with your own site. We fix the inconsistencies that make a model hedge.

Why CodeTrappers

We did this to our own site first

Every recommendation on this page is running on codetrappers.com, which is where we learned which ones matter.

Tested on production

Our schema graph, llms.txt and crawler rules are live and checkable. Ask for the URLs.

Engineers, not a content mill

The work is structural: headers, markup, caching rules, metadata. That is developer work, and it is done by developers.

Platform neutral

WordPress, Shopify, Webflow, Next.js or a hand-rolled site. The principles are the same and we have the access patterns for each.

What this is not

Not a ranking guarantee

Nobody controls what a model cites. We control whether your site is eligible, legible and consistent, then measure the result honestly.

Not a replacement for SEO

Google still sends most of the traffic. This work strengthens ordinary search too, because both reward the same clarity.

Not a one-off

Platforms change their crawlers and their citation behaviour often. The audit is a fixed price; keeping up is part of a retainer if you want it.

Questions

What people ask before they start

Something not covered here? Ask us directly and an engineer will answer.

Ask a question (https://codetrappers.com/contact/)

It overlaps heavily. The technical foundation is the same: crawlable pages, structured data, consistent entities. The difference is the reader. A model extracts and cites passages, so page structure and attribution matter more than keyword placement.

No, and be wary of anyone who does. What we guarantee is that the blockers are removed, the markup is valid and connected, and you have a before and after measured against the same set of questions.

Yes. We have done this on WordPress, on Next.js and on static sites. Access to templates, DNS and the CDN is what we need, not a particular CMS.

Around two weeks from access to report for a typical marketing site. Implementation depends on how much of the site needs restructuring, and we quote that separately once the audit is in.
