Know which visits turned into money

GA4, Tag Manager, server-side tagging and ad platform conversions set up properly, tested against real sessions, and documented so the next person can read them. On any platform.

- 300+ migrations, zero data loss
- Core Web Vitals in the green
- 24/7 emergency cover

What you get

Inside Analytics and Conversion Tracking

Get in touch (https://codetrappers.com/contact/)

A measurement plan

What counts as a lead, a sale and a step in between, agreed in writing before a single tag is placed. Most broken analytics start with nobody agreeing on this.

GA4 configured, not defaulted

Events named consistently, key events marked, internal traffic excluded, data retention set, and the reports you will actually open built in advance.

Tag Manager as the single place

Every tag through one container with a naming convention, version notes and a preview workflow, so nothing gets pasted into a theme file again.

Server-side tagging

Tags run from your own domain, which survives ad blockers and browser restrictions, cuts client-side script weight, and gives you control over what leaves the site.

Ad platform conversions

Google Ads, Meta and LinkedIn conversion events fed from the same source of truth, with enhanced conversions where the platform supports them.

The service

What gets tracked

The list is short on purpose. Twenty events nobody reads are worse than five that drive a decision.

Forms and leads

Submissions by form and by page, including the multi-step ones and the ones that live in a modal.

Ecommerce

View, add to cart, checkout steps, purchase and refund, with the item data GA4 needs to build revenue reports.

Calls and chat

Click-to-call, booking widgets and chat opens attributed to the session that produced them.

Content engagement

Scroll depth, video plays and file downloads where they tell you something about intent.

Consent

A consent banner wired to Consent Mode so measurement degrades gracefully instead of silently breaking, or silently breaking the law.

Ownership

Every property, container and ad account in your name with us as a user, not the other way round.

Why CodeTrappers

Set up once, trusted for years

The value of analytics is the confidence to act on it.

Tested against real sessions

Every event checked in debug view and in the live report before handover, on desktop and on a phone.

Documented

A one-page map of what fires where and why, so the marketing hire next year does not start from scratch.

Platform neutral

WordPress, Shopify, Webflow, Next.js or a custom app. The tags do not care, and neither do we.

Also useful

Looker Studio dashboards

One dashboard with the numbers the business runs on, refreshed from GA4 and the ad platforms.

Microsoft Clarity

Free session recordings and heatmaps installed alongside GA4 so you can see why the number moved.

Audit of what you have

Already have GA4? We check it and tell you what is double-counting, what is missing and what to delete.

Questions

What people ask before they start

Something not covered here? Ask us directly and an engineer will answer.

Ask a question (https://codetrappers.com/contact/)

Installed is not configured. Most accounts we inherit are counting page views and little else, or counting purchases twice. A short audit tells you which, and fixing it is usually a few days of work.

Tags run from a server you control instead of the visitor browser. It recovers conversions lost to ad blockers and browser privacy features and reduces the JavaScript your pages load. Worth it for any site spending real money on ads; optional otherwise.

Yes. A consent banner connected to Google Consent Mode so tracking respects the choice, and the tags are configured to behave correctly either way.

No. Tag Manager and GA4 sit above the platform. We have set this up on Shopify, Webflow, Next.js and custom applications as well.

Start here

Ready to get started with Analytics and Conversion Tracking?

Tell us what you need. We'll come back with a plan and a fixed price, usually within a day.

Get in touch (https://codetrappers.com/contact/) Book a consultation (https://cal.com/yusuf-mudagal-6abk5h/30min)

- A free audit first

We'll look at your site and tell you straight what needs doing.

- Fixed scope, fixed price

Agreed in writing before any work starts. No hidden fees.

- A real engineer on the call

You talk to the people who do the work, not a sales script.
