Many sites, one update

Run many sites from one WordPress install: shared plugins, per-site themes, central updates, and a clear answer to who is allowed to change what.

Shared plugins, per-site themes, central updates, and a clear answer to who is allowed to change what.

Centralized Management for Multiple Sites

Manage multiple WordPress websites from a single dashboard, reducing time spent on individual site maintenance, updates, and security management.

Scalable & Cost-Effective

WordPress Multisite allows you to scale effortlessly, whether you’re running a network of blogs, business websites, or franchise portals, without the need for separate installations.

Streamlined Updates & Maintenance

Update themes, plugins, and core WordPress files across your entire network with a single click, ensuring all your sites remain secure and up to date.

Custom User Roles & Permissions

Assign different access levels to site admins, editors, and contributors while maintaining full control over the network, improving workflow efficiency and security.

Secure, Stable & Optimized for Performance

We implement enterprise-grade security, caching solutions, and CDN integration to ensure your entire Multisite network runs smoothly and securely.

The service

WordPress Multisite – A Smarter Way to Manage

Multiple Websites

Unified Dashboard for Easy Control

Manage themes, plugins, and updates across all your sites from one central WordPress dashboard, reducing maintenance time and complexity.

Cost-Effective Hosting & Resource Optimization

Host multiple sites on one optimized WordPress installation, saving on server costs, reducing resource usage, and improving efficiency.

Brand Consistency Across Multiple Sites

Ensure uniform design, functionality, and branding across your entire network while allowing individual site customization when needed.

Multi-Region & Multi-Language Capabilities

Expand your global reach with region-specific sites, multilingual content, and geo-targeted features under one powerful Multisite setup.

Secure & Scalable Infrastructure

We configure robust security measures, backup systems, and custom access controls to keep your entire network safe, stable, and future-proof.

Custom Development & Integrations

Need custom functionality? We develop and integrate tailor-made solutions to enhance your Multisite network’s capabilities and user experience.

Why CodeTrappers

Development for WordPress Multisite: Centralized, Scalable and Built for Growth

Experience with WordPress Multisite: Secure, Scalable and Enterprise-Ready

At CodeTrappers, we specialize in WordPress Multisite setup, optimization, and maintenance, ensuring a seamless, secure, and scalable solution for businesses managing multiple websites. Get Started Now

Experienced with multisite on WordPress

With years of experience in Multisite development, we create custom solutions tailored for enterprises, franchises, universities, and large networks.

Secure & Optimized Network Performance

We implement firewalls, malware protection, caching solutions, and CDN integrations, ensuring fast load times and top-tier security for every site in your network.

Custom Roles, Permissions & Workflow Optimization

We design custom access controls, user roles, and admin capabilities to streamline workflow while maintaining network-wide security and control.

24/7 Support & Proactive Maintenance

We provide ongoing monitoring, updates, and priority support, ensuring your Multisite network remains secure, updated, and running at peak performance.

Questions

What people ask before they start

Something not covered here? Ask us directly and an engineer will answer.

Ask a question (https://codetrappers.com/contact/)

Multisite when the sites share a purpose and a team: one update run, shared plugins, central users. Separate installs when they have different owners, risk profiles or release schedules, because in multisite a bad plugin update is everyone's outage at once.

Yes for themes, and per-site plugin activation is normal. What is shared is the codebase and the database, which is what makes updates cheap and also what makes isolation weaker than separate installs.

It is exported to its own installation with users, media and URLs carried across and redirects in place. Worth asking before the network is built, because it is far easier when the content model was designed with it in mind.
