+91 9036138121 answered 24/7

Free issue report within 24 hours. What's broken, how urgent it is and the possible fixes, no obligation.

- 24/7 rapid response
- No second outage
- Secure, future-proof fixes

What we handle

The calls we get most often

If your site is down, hacked or losing orders, this is where to start. We triage first and explain second, in writing, not jargon.

Get in touch (https://codetrappers.com/contact/)

Urgent bug fixes

Encountering a broken website or unexpected errors? Our team swiftly identifies and fixes critical WordPress issues, getting your site back up and running in no time.

Malware removal & security patching

Hacked or dealing with malware? We clean up infections, remove vulnerabilities and implement advanced security measures to protect your site from future attacks.

Website downtime recovery

If your WordPress site is down, we diagnose and resolve the issue immediately to restore full functionality and prevent revenue loss or visitor frustration.

Plugin & theme conflict resolution

Conflicting plugins or broken themes can crash your site. Our experts quickly debug and resolve compatibility issues to maintain seamless performance.

Database & server issues

Facing database errors, slow queries or server crashes? We troubleshoot and optimize your WordPress database and hosting setup to ensure smooth operation.

Emergency WordPress fix

Trusted, fast and secure solutions

Broken site or white screen

Is your website stuck on a white screen or showing critical errors? We quickly diagnose and restore your site to full functionality.

Hacked website recovery

If your WordPress site has been hacked, we immediately remove malicious code, secure your site and strengthen defences to prevent future attacks.

SSL & security certificate issues

Facing SSL errors or security warnings? We fix SSL misconfigurations and ensure your website remains safe for visitors and search engines.

Slow website or performance issues

If your site is running slow or lagging, we optimize databases, remove unnecessary scripts and fine-tune performance for faster loading speeds.

Backup & data recovery

Accidentally lost important data or website files? We help restore backups and recover lost information to keep your site running smoothly.

Payment & checkout failures

eCommerce issues hit sales directly. We fix WooCommerce and payment gateway errors to keep transactions flowing for your customers.

WordPress down?

We fix it fast, no stress, no mess

When your website hits a critical issue, every second counts. We provide rapid emergency support for crashes, breaches, downtime and performance, with quick resolution, minimal disruption and long-term security.

24/7 rapid response team

Website emergencies don't follow a schedule, and neither do we. Our support team is available around the clock to diagnose and resolve urgent WordPress issues.

Expertise in critical issues

From hacked websites and plugin conflicts to server crashes and database failures, we've seen it all, and we fix it fast.

No second outage

Your site is already down; we are not going to take it down again to fix it. Work happens on a copy and goes live in one move, once it is proven.

Secure & future-proof fixes

Fixing the issue is just the beginning. We add security hardening, performance work and monitoring so it stays fixed.

Questions

What people ask before they start

Something not covered here? Ask us directly and an engineer will answer.

Ask a question (https://codetrappers.com/contact/)

Triage within the hour, any hour, including weekends. That means a person looking at your site and telling you what is wrong and how long it will take, not an automated ticket acknowledgement.

The symptoms, the URL, and access when you have it. If you have lost access too, say so: recovering it is part of the job and a common part of a hacked site. We do not need a full brief to start looking.

Triage tells you what is wrong and what fixing it takes, and the fix is quoted before it starts. Nobody should be asked to approve an open-ended bill during an outage.

Most of this work is exactly that. Sites built by somebody else, sometimes years ago, sometimes with no documentation. That is normal and it is what triage is for.

Start here

Take the first step toward a working website

Send us the symptoms and we'll come back with a full issue report: what's broken, how urgent it is and what it takes to fix.

Get in touch (https://codetrappers.com/contact/) Book a consultation (https://cal.com/yusuf-mudagal-6abk5h/30min)

Triage within the hour, 24/7, including weekends.

- A free audit first

We'll look at your site and tell you straight what needs doing.

- Fixed scope, fixed price

Agreed in writing before any work starts. No hidden fees.

- A real engineer on the call

You talk to the people who do the work, not a sales script.
