# Your content, in an app

Turn a WordPress site into a mobile app, or build one against the REST API. iOS, Android and PWA sharing the content backend your editors already use.

iOS, Android and PWA built against the WordPress REST API, so editors publish once and it appears everywhere without a second CMS.

- 300+ migrations, zero data loss
- Core Web Vitals in the green
- 24/7 emergency cover

What you get

## Inside Mobile app development

Get in touch (https://codetrappers.com/contact/)

### Seamless Integration with WordPress

Your mobile app syncs perfectly with your WordPress site, ensuring real-time updates, smooth content management, and a unified digital experience.

### Lightning-Fast Performance & User Experience

We optimize for speed, responsiveness, and smooth navigation, providing a frictionless mobile experience that keeps users engaged.

### Custom Features & Branding

From push notifications to in-app purchases, we develop custom features tailored to your business needs, ensuring your app aligns perfectly with your brand.

### Cross-Platform Compatibility

We build apps for iOS and Android, ensuring a consistent and optimized experience across all devices for maximum reach and engagement.

### Secure & Scalable Architecture

We implement advanced security protocols, ensuring your app is safe from threats, data breaches, and vulnerabilities, while also being scalable for future growth.

The service

## Turn Your WordPress Website into a High-Performance Mobile App

## Seamless Sync with WordPress

Your app stays in perfect sync with your WordPress website, ensuring real-time updates, dynamic content changes, and smooth functionality without manual effort.

## Blazing-Fast Performance & UI Optimization

We design apps that are lightweight, responsive, and highly optimized, ensuring fast load times, smooth navigation, and an intuitive user experience.

## Native & Cross-Platform Compatibility

We build apps for iOS, Android, or both, ensuring your audience gets a seamless experience regardless of the device they use.

## Push Notifications for Better Engagement

Increase user retention with real-time notifications for new updates, offers, or blog posts, keeping your audience engaged and coming back for more.

## Secure & Scalable Development

We prioritize security, implementing encryption, authentication, and data protection measures to keep your app safe from cyber threats.

## Custom Features Tailored to Your Needs

From in-app purchases and chat features to social media integrations and analytics, we develop custom functionalities to enhance your business goals and user experience.

Why CodeTrappers

# From Web to App Transform Your WordPress Site into a Mobile Powerhouse!

## Mobile App Development for WordPress: Fast, Secure & Seamlessly Integrated

Your audience is on mobile, is your business ready? At CodeTrappers, we turn your WordPress website into a high-performance mobile app, ensuring speed, security, and a seamless user experience. With expert development and ongoing support, we help you reach more users, increase engagement, and drive business growth. Get Started Now

## Proven Expertise in WordPress & Mobile Apps

With years of experience in WordPress and mobile app development, we build apps that sync perfectly with your website while maintaining high performance and usability.

## Native & Cross-Platform Development

We develop iOS and Android apps that offer smooth functionality, fast load times, and a user-friendly experience across all devices.

## Secure, Scalable & Future-Ready

Security is a priority! We implement end-to-end encryption, authentication protocols, and scalable architecture to keep your app safe and adaptable to future growth.

### Ongoing Support & Maintenance

We don’t just build your app, we maintain, update, and optimize it for continued performance, ensuring bug-free functionality and an excellent user experience.

Questions

## What people ask before they start

Something not covered here? Ask us directly and an engineer will answer.

Ask a question (https://codetrappers.com/contact/)

A progressive web app covers a lot of what people ask for at a fraction of the cost, and does not need store approval. Native earns its cost when you need push notifications at scale, offline behaviour, device hardware or a store presence customers expect. We will say which one your case actually needs.

Yes. WordPress becomes the backend through the REST API, so editors keep publishing where they already do and the app reads from the same content as the website. That is usually cheaper than running two content systems and always cheaper than keeping them in sync by hand.

We do the build, the store assets and the submission, under your developer accounts so the apps stay yours. Rejections happen and are usually about metadata or privacy declarations rather than the code, and we handle the resubmission.

Start here

## Ready to get started with Mobile app development?

Tell us what you need. We'll come back with a plan and a fixed price, usually within a day.

Get in touch (https://codetrappers.com/contact/) Book a consultation (https://cal.com/yusuf-mudagal-6abk5h/30min)

- A free audit first

We'll look at your site and tell you straight what needs doing.

- Fixed scope, fixed price

Agreed in writing before any work starts. No hidden fees.

- A real engineer on the call

You talk to the people who do the work, not a sales script.
