# Make it fast, then prove it

Core Web Vitals work on real sites. We measure LCP, CLS and render-blocking scripts, fix what is actually costing you, and show you the before and after.

We measure LCP, CLS and what is blocking render, fix what is actually costing you, and hand you the before and after.

- 300+ migrations, zero data loss
- Core Web Vitals in the green
- 24/7 emergency cover

What you get

## Inside Page Speed Optimization for WordPress

Get in touch (https://codetrappers.com/contact/)

### Advanced Caching for Instant Load Times

We implement server-side caching, browser caching, and object caching to store essential data and load your pages instantly for returning visitors.

### Image & Media Optimization

Large images slow down websites. We use next-gen formats (WebP), compression, and lazy loading to ensure your visuals look great without affecting speed.

### Minification & Code Optimization

We clean up CSS, JavaScript, and HTML, removing unnecessary code and reducing file sizes to improve load times and website responsiveness.

### Database & Server Performance Enhancements

A bloated database slows down queries. We optimize database tables, remove junk data, and fine-tune server configurations for peak efficiency.

### Core Web Vitals & SEO Boost

Google ranks fast websites higher. We optimize your site for Core Web Vitals, reducing First Contentful Paint (FCP), Largest Contentful Paint (LCP), and Cumulative Layout Shift (CLS) to boost SEO and user experience.

The service

## Supercharge Your WordPress – Faster Load Times,

# Better Rankings & Higher Conversions

## Faster Load Times, Happier Visitors

Slow websites frustrate users. We optimize caching, scripts, and media to ensure your site loads instantly, keeping visitors engaged and reducing bounce rates.

## Higher SEO Rankings with Core Web Vitals

Google prioritizes fast-loading sites. We optimize for Core Web Vitals (LCP, FID, CLS), helping your site rank higher in search results and attract more organic traffic.

## Optimized Images & Media Without Quality Loss

Large images slow down websites. We compress images, convert them to WebP format, and enable lazy loading, keeping your visuals sharp without sacrificing speed.

## Minimized Code for Peak Efficiency

Bloated CSS, JavaScript, and HTML slow down performance. We minify and clean up unnecessary code, ensuring your website runs smoothly and efficiently.

## Database & Hosting Optimization

We clean and optimize your database, remove unnecessary data, and configure your server for peak performance and faster response times.

## Seamless Mobile Optimization

Most users browse on mobile. We optimize your site for fast, smooth, and responsive performance across all devices, ensuring a flawless experience everywhere.

Why CodeTrappers

# Speed Matters Make Your WordPress Site Lightning-Fast!

## Trusted speed optimisation for WordPress: faster, smoother, more reliable

A slow website drives visitors away and affects your SEO rankings, conversions, and user experience. At CodeTrappers, we ensure your WordPress site runs at peak performance, keeping it fast, efficient, and highly optimized. Get Started Now

## Proven Performance Optimization Experts

With years of experience in WordPress speed optimization, we have helped businesses achieve blazing-fast load times and improved website performance.

## Advanced Caching & Code Optimization

We fine-tune caching, CSS/JS minification, and server settings to eliminate lag and make your site load instantly.

## Mobile & SEO-Focused Enhancements

A fast site ranks higher. We optimize for Google Core Web Vitals, ensuring your website performs flawlessly on all devices while improving search engine visibility.

### Ongoing Monitoring & Support

Speed optimization isn’t a one-time fix! We provide continuous monitoring, analysis, and performance improvements to keep your site fast and reliable.

Questions

## What people ask before they start

Something not covered here? Ask us directly and an engineer will answer.

Ask a question (https://codetrappers.com/contact/)

Core Web Vitals in the green on a real phone on mobile data, not on a laptop on office wifi. That is how most of your traffic actually arrives, and it is the measurement that matters.

Usually. Most of the win is in images, caching, render-blocking assets and the plugin footprint, none of which needs a rebuild. If the theme itself is the bottleneck we will say so rather than charging for work that cannot help.

Before and after measurements on the same pages and the same conditions. Page speed is a sales problem before it is a technical one, so the numbers that matter are the ones on the pages that make you money.
