Moving from Wix to WordPress

Wix has no full export, so this is a content extraction and rebuild. We crawl every URL, map the redirects and keep your rankings intact.

Wix has no full export, so this is never a database migration. Content gets extracted, the design gets rebuilt, and the URLs get mapped so you keep your rankings.

Before anyone quotes

What survives the move, and what does not

Most migration disputes come from this list being assumed rather than agreed. So we agree it first.

Comes across

- Page text and images, pulled page by page
- Blog posts, via the RSS feed
- Your domain, pointed at the new host
- Page titles and meta descriptions

Gets rebuilt

- The entire design: Wix markup is proprietary and does not port
- Forms, and wherever their submissions were going
- Anything from the Wix App Market
- Wix Stores, Bookings and Members areas

The expensive surprises

Three things specific to Wix

There is no export button

Wix does not let you take a database with you. Anyone promising a one-click move is describing a scrape. Done carefully that is fine, but it is a content extraction and should be priced as one.

The URLs do not line up

Wix puts blog posts under /post/ and pages in a flat structure. Without a redirect map written before launch, every ranking page returns a 404 on day one.

ADI layouts map to nothing

Sites built by Wix ADI have no structure underneath, just absolutely positioned blocks. Rebuilding is genuinely faster than trying to translate it.

How it runs

Five steps, same every time

1. 1

Crawl what is live

Every URL currently indexed, exported to a sheet. This becomes the redirect map and the definition of done.

2. 2

Audit the export

What the platform gives us, compared against what the crawl found. The difference is the rebuild, and it gets priced before we start.

3. 3

Build on staging

The new site goes up somewhere private, with real content imported, so you review the actual thing rather than a mockup.

4. 4

Map every redirect

Old URL to new URL, one row at a time, tested as 301s on staging before anything points at production.

5. 5

Cut over and watch

DNS moves, then we monitor crawl errors and traffic for the fortnight that follows, because that is when problems surface.

Before you commit

Leaving Wix, answered

Something not covered here? Ask us directly and an engineer will answer.

Ask a question (https://codetrappers.com/contact/)

From Wix we can bring over: page text and images, pulled page by page; blog posts, via the RSS feed; your domain, pointed at the new host; page titles and meta descriptions. Everything else on the site has to be rebuilt, and we agree which is which before quoting.

The parts with no equivalent on the other side: the entire design: Wix markup is proprietary and does not port; forms, and wherever their submissions were going; anything from the Wix App Market; Wix Stores, Bookings and Members areas. This is where the cost sits, so it is priced up front rather than discovered halfway through.

Not if the redirects are done properly. We crawl every URL that is currently indexed, map each one to its new address, and test those as 301s on staging before anything points at production. Then we watch crawl errors and traffic for the fortnight after cutover.

Wix does not let you take a database with you. Anyone promising a one-click move is describing a scrape. Done carefully that is fine, but it is a content extraction and should be priced as one.

Start here

Send us the Wix site

We will crawl it, work out what the export actually gives us, and come back with a fixed price and the redirect map included.

- A free audit first

We'll look at your site and tell you straight what needs doing.

- Fixed scope, fixed price

Agreed in writing before any work starts. No hidden fees.

- A real engineer on the call

You talk to the people who do the work, not a sales script.
