WooCommerce stores that stay open

WooCommerce stores built and looked after so they stay open on sale days. Checkout speed, plugin conflicts, stock sync and hosting headroom, handled.

A store that goes down on a sale day costs more than a year of maintenance. We build, harden and look after WooCommerce for shops that cannot afford a bad afternoon.

31stores **2,140,208**monthly visits served **Since 2016**building on WordPress

What usually brings people here

The same four problems, over and over

Checkout is where you lose them

Every extra second between cart and confirmation is abandoned revenue. Checkout gets optimised first because that is where the money is decided.

Thirty plugins, one conflict

Stores accumulate extensions until an update breaks order emails or tax rules. We cut the stack down and test the ones that stay against real orders.

Sale days break things

Traffic that is fine on a Tuesday is not fine during a campaign. Caching, database load and hosting headroom get sized for the peak, not the average.

Stock and orders drift

When the store, the ERP and the marketplace disagree about inventory, someone gets a refund. Sync is a build problem worth solving properly once.

What we do about it

Questions

What people ask before they start

Something not covered here? Ask us directly and an engineer will answer.

Ask a question (https://codetrappers.com/contact/)

31, all listed in our public showcase with the stack and traffic for each. Between them they serve about 2,140,208 visits a month. We have been building on WordPress since 2016.

Every extra second between cart and confirmation is abandoned revenue. Checkout gets optimised first because that is where the money is decided.

Traffic that is fine on a Tuesday is not fine during a campaign. Caching, database load and hosting headroom get sized for the peak, not the average.

No. A large share of our work is inheriting sites someone else built: auditing them, stabilising them, then improving performance and security from there. Starting over is a decision, not a prerequisite.

Fixed scope and fixed price, agreed in writing before anything starts. We look at the site first and come back with what we would do and what it costs. The audit itself is free and carries no sales call.

Start here

Tell us which of the 4 problems is yours

Send us the URL. We will look at it properly and come back with what we would actually do, and what it would cost.

Get in touch (https://codetrappers.com/contact/) Book a consultation (https://cal.com/yusuf-mudagal-6abk5h/30min)

- A free audit first

We'll look at your site and tell you straight what needs doing.

- Fixed scope, fixed price

Agreed in writing before any work starts. No hidden fees.

- A real engineer on the call

You talk to the people who do the work, not a sales script.
