Web apps built on WordPress

Custom post types, real permissions and API integrations written as versioned code. For sites that have outgrown plugins and become software.

Past a certain point a site stops being pages and starts being software: accounts, permissions, data models, integrations. WordPress handles that well when it is written as code rather than assembled from plugins.

14application builds **549,008**monthly visits served **Since 2016**building on WordPress

What usually brings people here

The same four problems, over and over

You have outgrown the plugin stack

What began as a form and a directory now needs roles, workflow and reporting. That is an application, and it should be built like one.

The data model is fighting you

Posts and categories bent into a shape they were never meant to hold. Custom post types, real meta and proper relationships fix this at the root.

Permissions are guesswork

Who can see what, and who can change it, decided by whichever plugin loaded last. Capabilities belong in code you can read and test.

Everything needs to talk to everything

CRM, billing, support, internal tools. Integrations written as versioned code with retries and logging, not a webhook someone set up once.

What we do about it

The work this usually turns into

Questions

What people ask before they start

Something not covered here? Ask us directly and an engineer will answer.

Ask a question (https://codetrappers.com/contact/)

14, all listed in our public showcase with the stack and traffic for each. Between them they serve about 549,008 visits a month. We have been building on WordPress since 2016.

What began as a form and a directory now needs roles, workflow and reporting. That is an application, and it should be built like one.

Who can see what, and who can change it, decided by whichever plugin loaded last. Capabilities belong in code you can read and test.

No. A large share of our work is inheriting sites someone else built: auditing them, stabilising them, then improving performance and security from there. Starting over is a decision, not a prerequisite.

Fixed scope and fixed price, agreed in writing before anything starts. We look at the site first and come back with what we would do and what it costs. The audit itself is free and carries no sales call.

Start here

Tell us which of the 4 problems is yours

Send us the URL. We will look at it properly and come back with what we would actually do, and what it would cost.

Get in touch (https://codetrappers.com/contact/) Book a consultation (https://cal.com/yusuf-mudagal-6abk5h/30min)

- A free audit first

We'll look at your site and tell you straight what needs doing.

- Fixed scope, fixed price

Agreed in writing before any work starts. No hidden fees.

- A real engineer on the call

You talk to the people who do the work, not a sales script.
