How to Secure a WordPress Website from Cyber Attacks

3 Mar 2025 1 min read

WordPress websites are a common target for hackers. To protect your site:

Enable Two-Factor Authentication (2FA) – Prevent unauthorized logins. **Use a Security Plugin** – Install Wordfence or Sucuri for firewalls. **Limit Login Attempts** – Block brute-force attacks. **Keep WordPress & Plugins Updated** – Stay protected from vulnerabilities. **Enable Automatic Backups (https://codetrappers.com/maintenance-for-wordpress/)** – Recover quickly if your site is compromised.
